

Tech T-Rex Training Gear

Thank you for purchasing our Tech T-Rex Training gear. It is specifically designed for the T-Rex family of mini helicopters. It will help to minimize the chance of tipping over the helicopter when practicing.

Installation

Tools & Materials required:

- Cutting pliers or knife
- Thin CA, wood glue etc. (optional)
- 1. Insert each wood rod (4) into the center block all the way in until it hits bottom. They should fit snug. Try each end if needed. Gluing them in is optional and will not allow for disassembly. See figure 1.
- 2. Attach a ball to each rod end using two (2) small tywraps as shown. Leave space so the balls rotate freely. Glue in place using thin CA. See figure 2.
- **3**. Attach the training gear assembly to the helicopter using four (4) large tywraps as shown. Be sure the center plate is centered between the landing gear. *See figure 3.*

Figure 2.

Figure 3.

Learning Tips:

- Keep the nose of the helicopter pointed into the wind.
- Practice on a large flat and paved area like a parking lot etc.
- Use a "Heading Hold" gyro.
- Practice with a simulator as well.
